Regul. Peptr. 75:45-53(1998).

-!- FUNCTION: Receptor for neuropeptide Y and peptide YY. The activity of this receptor is mediated by G proteins that inhibit adenylate cyclase activity. Seems to be associated with food intake. Could be involved in feeding disorders (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Highest to tachykinins receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Extracellular (Potential).

associated with feeding behavior.";
J. Biol. Chem. 271:26315-26319 (1996).

I. Biol. Chem. 271:26315-26319 (1996).

I. FUNCTION: Receptor for neuropeptide Y and peptide YY. The activity of this receptor is mediated by G proteins that inhibit adenylate cyclase activity. Seems to be associated with food intake. Could be involved in feeding disorders.

I. SUBCELLULAR LOCATION: Integral membrane protein.

I. TASUE SEPECTICITY: Brain, hypothalamus.

I. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

Highest to tachykinins receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CAGGACTATAATATGGATTTAGAGCTCGACGAGTATTATAACAAGACACTTGCCACAGAG

                                                  MEDLINE=94859646; PubMed=9315606; DOI=10.1016/S0005-2736(97)00131-4; Nakamura M., Yokoyama M., Watanabe H., Matsumcto T.; Nakamura M., Yokoyama M., Watanabe H., Matsumcto T.; Natsumcto T.; Moining, organization and localization of the gene for the mouse neuropeptide Y-Y5 receptor."; Biochim. Biophys. Acta 1328:83-89(1997).
-!- FUNCTION: Receptor for neuropeptide Y and peptide YY. The activity of this receptor is mediated by G proteins that inhibit adenylate cyclase activity. Seems to be associated with food intake. Could be involved in feeding disorders (By similarity).
-!- SUBCELULIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
-!- Highest to tachykinins receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SEQUENCE FROM N.A. Ito Y., Minezawa M.;
Submitted Gor-1998) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: Receptor for neuropeptide Y and peptide Y. The activity of this receptor for neuropeptide Y and peptide Y. The activity of this receptor is mediated by G proteins that inhibit adenylate cyclase activity. Seems to be associated with food intake. Could be involved in feeding disorders (By similarity).
-! SUBCELLULAR LOCATION: Integral membrane protein.
-! SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Highest to tachykinins receptors.
                                                                                                                                                                                                                                                                                                  1124 AAAAAGAGATCTCGAAGTGTTTTCTACAGACTGACGATACTGATATTAGTATTTGCTGTT

i Sequence 4 Application US/09200673A

patent No. 6316203

GENERAL INFORMATION:
APPLICANT: Gerald, Christophe P.G.
APPLICANT: Weinshank, Richard L.
APPLICANT: Weinshank, Theresa
TITLE OF INVENTION: Methods of Modifying Feeding Behavior, Compounds Useft;
TITLE OF INVENTION: Atypical Neuropeptide Y/Peptide YY Receptor (YS)
TITLE OF INVENTION: Atypical Neuropeptide Y/Peptide YY Receptor (YS)
TITLE OF INVENTION: Atypical Neuropeptide Y/Peptide YY Receptor (YS)
TITLE OF INVENTION ON WHERE: US/09/200,673A
CURRENT FILING DATE: 1998-11-25
EARLIER FILING DATE: 1998-11-25
EARLIER FILING DATE: 1998-11-20

EARLIER FILING DATE: 1994-12-02

NUMBER OF SEQ ID NOS: 17

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 13, Application US/09771956;
Patent No. US20010031474A1
GENERAL INFORMATION:
APPLICANT: Bennett, Michele
APPLICANT: Brobbeck, Robbin
APPLICANT: Krause, James
TITLE OF INVENTION: Chimeric Neuropeptide Y Receptors;
FILE REFERENCE: N2000.001;
CURRENT APPLICATION NUMBER: US/09/771,956;
CURRENT APPLICATION NUMBER: 2001-01-29;
NUMBER OF SEQ ID NOS: 31;
SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-09-393-696-23
